ER PR Patients Old Central West.xls

Hi Heather,

I'm attaching two spreadsheets with the information from our area concerning ER/PR patients. I've think we have all the data but wanted to cross reference it with yours.

My calculations suggest that there are probably only 51 from the old Central West and 32 from the Central East that are actually of any immediate concern. I have based that on if ER or PR 30% or greater then there would be no need to retest the patient. I hadn't narrowed this down for patients tested after 2001 but that could be done if it is necessary. I just want to make sure that we have agreement on the final list so that any communication is based on the same base information.

Can you review these spreadsheets and let me know if you or others have any changes they wish us to make?

Thanks,

Larry
