Attached please find the first set of ER/PR results.

The code I used is as follows:

RS# - our research number

SPECIMEN# - your case number

PATIENT NAME - patient's name

BLOCK - block number supplied

COMMENTS - discrepancies in block information

Tumour - my tumour type with D-ductal, DL-ductal with lobular features, DT-ductal with tubular features, L-lobular, PAP papillary, DCIS-ductal carcinoma in situ, DCIS/M- ductal carcinoma in situ with micrometastasis (<1mm), C-collodial, T-tubular, MCA-metastatic CA and NT-no tumour

ER - % cells positive 6F11, LSAB procedure

PR - % cells positive PGR1294, LSAB procedure

IC - internal controls with P-present but not stained, PS-present and stained, PSW-present and stained weakly, A-absent

F/P - fixation and processing with A-adequate and P-poor

Threshold for positive ER/PR result: staining of any intensity in >1% invasive tumour cells

Positive and negative laboratory external controls stained appropriately
