Oscar:

Thanks. As per our phone conversation, there was a transcribing error. The correct numbers are:

1023 total patients
 637 (not 698) confirmed results
 386 (not 325) changed results.

Sorry for the error.

Robert

Robert Thompson
 Secretary to Cabinet (Health Issues),
 Chair, Task Force on Adverse Health Events

Perhaps you need to check with Robert - so we can clarify this discrepancy.

Hi Deb, if you do the math here the number of changed results was 383.

Minister Provides Additional Information on ER/PR Database

Today the Honourable Ross Wiseman, Minister of Health and Community Services, provided additional information on the database compiled by the Newfoundland and Labrador Centre for Health Information (NLCHI) on estrogen and progesterone receptor (ER/PR) re-testing.

"Our government engaged the Newfoundland and Labrador Centre for Health Information in order to ensure we have the most comprehensive database possible that captures relevant information on ER/PR testing between 1997 and 2005," said Minister Wiseman. "At the time of the update I provided in February, the question was posed as to how many patients who underwent re-testing and are now deceased had changed results. This information at that time had not been extracted from the database but I felt it should be answered prior to the conclusion of the database project."

Of the 1,013 patients whose results were sent for re-testing, 322 are deceased and 691 are living; this information was provided in the last update. Additional analysis shows that the number of deceased patients whose test results changed is 108, and the number of living patients whose results changed is 275.

"To understand these numbers, it is essential to remember that a changed ER/PR test result does not necessarily mean that appropriate cancer treatment was delayed, as physicians tell us that this test is one factor among many that help determine course of treatment. Nor do these numbers indicate that there is a relationship between an inaccurate ER/PR test and progression of the disease or death," said Minister Wiseman. "In addition, the source for identifying the number of deceased patients was the Provincial Mortality Database, which does not specify cause of death.

"I also want to take this opportunity to ensure clarity around the role of the Commission of Inquiry," said Minister Wiseman. "While its mandate does not include an examination of the circumstances of individual patients involved in the ER/PR re-testing process, its areas of focus will look at why there was a high rate of conversion of test results, why the problems were not detected earlier than 2005, whether the response by officials was timely and appropriate, and if current ER/PR testing and quality assurance processes reflect best practices. I look forward to receiving the report of the commissioner and the answers that the work of the commission will provide."

Minister Wiseman also noted that with the conclusion of the database project, the Secretary to Cabinet for Health Issues, Robert Thompson, would be advancing work related to the Task Force on Adverse Health Events

(see Terms of Reference in backgrounder), which was established by the Provincial Government. It is expected that further details on the direction of the task force will be provided in the coming weeks.
