Hi,

This is for your information. In the three hours I was awake last night, i got more incensed then ever about these overlapping results.....I'll let you know what I hear back.....

Heather

Hi,

The more I thought of it last night, the more I realized that it is critical that we get the results for the time we ran both the Dako and Ventana system in April 2004. This would give us exactly what we need.....our positivity rate with both systems and our conversion rate as well. We would have been in close contact with the company at that time and our rates during that period obviously were satisfactory to all involved because we went live on the Ventana system. Can we get the results for that period of time quickly?

Also, I hate to nag (but I do it so well!!) could you give me the numbers of samples we sent to Mt Sinai during that 6 week period in 2003? If we had more than about 15 or so we should probably look at the positivity rate as they were done elsewhere.

Thanks

Heather
