 Subject: ER/PR Update

Hi everyone,

This is an update as of this morning, February 10, 2006:

**Confirmed negative**

St. John's: all except five patients have either been determined to have died or have been contacted.  
 Of these five, one does not speak english but sees Dr. McCarthy so we will follow-up that way; two moved away several years ago; the final two we have numbers but there is no answer *(? registered letter)*

Clareville: there was one to be contacted and she was told

Carbonear: there were 11; 10 have been told and 1 is deceased. *(? how are we going to handle the deceased?)*

Western: all the confirmed negative have been informed except for 1 that needs to be checked. They have 3 that they don't have contact information on and they have 4 that were not on their original list. Dr. Jenkins is following up on that

Central: I'll check on them later today

St. Anthony: we have not heard from Dr. Jong re: the plan for notification of St. Anthony. There are 3 to be informed there.

**Paneled**

St. John's: A total of 147 have been paneled

- Multiple results requiring individual follow-up: 1
- Deceased: 5
- Confirmed negative (contacted by QE) 7
- No recommendation for cause 22  
(this cause could be because of their low risk, advanced age, was offered previously and declined etc)
- No recommendation as already treated 56  
(although some of these may have received treatment appropriately, some may be on Tamoxifen for metastasis since the original diagnosis)

- Recommended for Tamoxifen 52
- To be assessed prior to recommendation 3 *? significance*
- No cancer clinic chart 7
- chart at external clinic 2
- Family MD asked to send clinical info 1

**Total 147**

**Left to panel 46**

- Clareville: 11
- Carbonear: 21
- Central: 70 (there are 46 patient results missing from this region)
- Western: 81 (they are trying to determine the number that are missing)
- Total: 183**

The Cancer Clinic has reviewed all the names from the region (except Western) and determined who has Cancer Clinic charts. I will add this up today.

Heather
