Dan Finkner

Ken Brown

G. Jackson

Lor Simon

Ben Carter

Start 1040 hrs

Ken Green a presentation about his teaching in Jewish Genetic
 Ancestry Vascular System - went well. Brought back good information
 about antibodies

Mary Green presentation about Mount Sinai, brought back excellent
 information about documentation, how a paper trail is good and
 exactly what charts are required to help the system flow

has given presentation with handouts about the work they
 have been doing, things look good

The group has a discussion about the Vascular System, it
 was agreed that things are going well. Terry summarized
 by saying it great to have that the system is reliable,
 reproducible and the ER method is working. The only issue
 is internal, the pathologist agrees on interpretation. It
 was stated that all positive and negative from ~~outside~~
 specimens sent many match perfectly with positive

and machine results from ST John's. I asked the question
what have we done different to make the system reliable,
Ken said they added a blocker to block endogenous materials
which can sometimes clean up the background, it was recommended
by Taish from Mount Sinai but no blocker is used on beads
at the Jewish General Hospital it is subjective.

IT was also discussing about the UMS, the FDA
approves Turner Analyzer that will benefit and also Pathologists
in assessing performance regarding ER, PR and Her2neu.
IT was approved by all present except by Ben Spector to
bring the technology in for a two month trial period.
