**Subject:** Breast Sample Retesting Calls

Hi Sharon

Here is an update of patient calls re. breast sample retesting as of Dec7th:

- \* 142 patient charts reviewed, up to and including 2002 file
- \* files 2003-2005 remaining & predict 2 -3 days required to complete, especially if recalls required
- \* many recalls required (sometimes 3 calls), especially the 2000 file
- \* was successful will many of the recalls completed last evening
- \* recalls still required = 12 of 142 patients (note have not done recalls for 2002 file yet which = 6 of the 12)
- \* total # of patients without updated contact information, including next of kin contact information, = 11 of 142 pts
- \* total # of patients expired = 17 of 142 (many discovered after calls made)

Also, Ken Jenkins was ? possibly % of patients who commented they were on tamoxifen. I calculated 27 of 142 patients who reported this. I thought it seemed to be more??

Hope this is helpful, If you have other questions please call.

Bonnie Walker
