HEATHER,

I HAVE A COMPLETE LIST OF ALL OF OUR RETESTS FROM THE HCCSJ AND OUT OF TOWN IN MY OFFICE FOR YOU.

Subject: ER PR database

Hi,

I just wanted to update you on the database.

On my list I have 406 patients. 74 are confirmed as deceased. There are 37 on my list that were not on the list of patients that Terry gave me in August (but of that 37, we have gotten results on 5)

Terry: can you send me over a list of all the patient names that you have sent, so I can make sure we haven't missed any?

In the results list from yesterday, there were several patients who had more than one sample sent.

Dr. Cook: Can you let me know if you want the separate specimens tracked or can I just track the individual patients?

Of the results received and only going by individual patients:

- 6 patients are confirmed deceased
- 140 are either confirmed alive or their status is

unknown right now

- 90 are OK (64%)
- 1 converted but had Tamoxifen
- 33 converted and we are unaware whether they had Tamoxifen or not (24%)
- 16 are query, 2 are noted as being given the option of Tamoxifen

Dr. Cook: what do we need to do to move these 16 into one of the two other groups?

Of the 192 alive or unknown status outstanding on my list:

- 169 are known to be alive
 - 17 of these are confirmed to have received Tamoxifen
- 23 patients it is not known whether they are alive are dead

Unfortunately, at this point in time the Tamoxifen data is incomplete.

I'm meeting with Chris Power in a little while and we will figure out who the physician contact is (and a way to find out!!) and see if we can get more complete information on Tamoxifen.

As always this makes total sense to me!! If this isn't clear or you want me to do something else, just give me a call...probably page me today would be best 570-9703

Heather
