

Aug 1/2005

- D. Cook
  - 11 cases sent to M+Sin - only 1 result positive
  - 5 are as of date
  - 1 case 10/20 positive - one last night
  - 5 are non results

- D. McCarty - positive - positive
  - 5 are changed into the PR's
  - as long as we use positive - this is ok

- D. Cook - now have 11 cases we can use as controls
- will do future controls with M+Sin for next 2-3 months - M+Sin is successful by AAP of perhaps 2-3 cases

- - D. McCarty - vs. comparable with files from and not Sin

- D. Carter - there has been broad variation in the results over the years

- Tumour Board discussion talked about some which had been found
- this means of this one but for a point with labels are tested negative

- June <sup>now</sup> 2002 - full of that year - no + reports

- - 16/25 conversions have been ~~notified~~ reported
  - 1 D. K... - not p
  - 1 D. Bone - not p
  - 10 have been not p by NCTR
  - 4 clearly a different file

- test strategies 10 cases but the first 7
- consensus - develops a process to identify the  
key points and re-test 45 x 10
- overviews to identify the cause of injury cases

**Note #11****August 1, 2005**

- Dr. Cook:
  - 11 cases sent to Mount Sinai – negative and variable positives.
  - Some areas of disagreement.
  - One case 10% positive came back negative.
  - Some minor variations.
  
- Dr. McCarthy:
  - Positive is positive.
  - Some disagreements with the PR's.
  - As long as one ER or PR is positive this is okay.
  
- Dr. Cook:
  - Now have 11 cases we can use as controls.
  - Will do future correlation with Mount Sinai for next two or three months. Mount Sinai is accredited by AAP and participates in outside review.
  
- Dr. McCarthy. Very comfortable with future plan and Mount Sinai.
- Dr. Carter:
  - There has been known variability in the results over the years.
  - Tumour Board discussion. Talked about issue which has been found.
  - The memory of this case back when a patient was lobular CA tested negative.
  - June – November 2002. Follow-up that year and no positive reports.
  - 16/25 conversions have been reported.
  - 1. Dr. Kwan notified.
  - 1. Dr. Boone notified.
  - 10 have been notified by NCTR.
  - 4 already on appropriate treatment.
  
- Consensus:
  - Test and re-confirm 10 cases which tested positive.
  - Develop a process to identify negative testing patients and re-test as soon as possible.
  - Oncologist to notify Dr. Carter of urgent cases.
